eFormatter

Sometimes it seems like technology creates as many problems as it solves. Simple tasks that should be routine - like exporting data from your existing software and converting into another solution - are complex, expensive, time-consuming and error-prone.

That's why we created eFormatter!

eFormatter is a completely customized, yet powerful middleware technology solution that can extract data from any system or report and "*auto-magically*" convert it into a commonly-used format like .CSV, .XLS, or PDF - without ever touching your database or software!

HERE'S HOW IT WORKS

As a report-driven middleware utility, eFormatter takes your existing report(s) output and then converts into any format you need with all the formatting rules, complex formulas and more! It's only limitation is your creativity.

Initial Set Up

- You provide copies of your reports and specify the desired output.
- We perform our magic, writing code and mapping fields.

After Set Up, Using eFormatter is Simple

1. Upload your reports or documents to our secure, cloud-based portal.
2. Let eFormatter extract the data and apply user-defined formatting rules.
3. Download your new file format/output!

eFormatter, Inc.

As one of the nation's premier fixed asset consulting firms, eFormatter was created to assist our staff with various client projects - and now this same powerful tool is available to you and your business. Regardless of industry, application or need, eFormatter can be customized to meet just about anyone's complex data requirements.

THE BENEFITS

Some of the most important benefits of eFormatter include:

Saves Time & Money
Manual data conversion that takes days or weeks is reduced to just minutes.

Improves Speed & Accuracy
eFormatter eliminates manual data manipulation and transcription errors.

No IT Support Required
Not only is eFormatter really simple to use, it runs in the cloud so there is no software or server to install, configure, and support.

It Never Breaks
Unlike installed software or a custom database connection utility, eFormatter isn't affected by software upgrades - so version updates won't break it.

COMMON EFORMATTER TASKS

eFormatter was born out of necessity. For years, we've used this same tool to help hundreds of clients solve common challenges like:

- Move disparate data from a fixed asset system to budgeting software
- Seamlessly transfer HR data to a payroll system or service (like ADP)
- Effortlessly pass complex data updates to an ERP system (and vise versa)
- Create automated and powerful reconciliation engines

It's highly flexible and totally customizable middleware solution - if you can think it, we can build it using eFormatter.

PRICING

eFormatter is available as an affordable monthly service (plus a one-time set up fee because each formatting process is custom-built). Once you start using it, you'll find that eFormatter quickly pays for itself.
