New AssetFlow Web Portal Streamlines Fixed Asset Accounting

Fixed Asset Consulting, LLC launches new online platform to simplify and centralize fixed asset management for companies with multiple locations or users.

EUGENE, OREGON – September 06, 2017 – [Fixed Asset Consulting, LLC](#), a firm led by nationally recognized fixed asset expert Angie Chase (*formerly Bolton-Lyons*), has announced the launch of AssetFlow. [AssetFlow](#) is a web portal for companies with multiple offices and users that want to simplify and take control of their fixed asset management process. The web-based platform allows customers to continue using their existing on-premises asset accounting software while leveraging a web portal to view, manage, and consolidate their data in a single, centralized location. The AssetFlow portal is now live and available to customers on a subscription basis.

Angie points out that AssetFlow resolves many common issues with fixed asset accounting from multiple locations. “It simplifies the whole fixed asset process by putting an end to manual data entry inconsistency and errors caused by cutting and pasting from spreadsheets and applications across multiple users and locations. With our new AssetFlow platform, all of that tedious work is eliminated because it automatically extracts, consolidates and formats the data for your existing on-premises software. It even applies built-in depreciation logic and approval workflow based on your company-specific policies.”

The AssetFlow web portal is ideal for companies that want to centralize and simplify the entire asset accounting process from start to finish. Angie notes, “Your asset data comes into the AssetFlow portal, it’s automatically formatted and consolidated, approval workflow is implemented, depreciation rules are applied, monthly fixed asset entries are generated, creating accurate data that flows right back into your existing on-premises accounting software.” AssetFlow web portal output is compatible with SAP, JD Edwards, BNA Fixed Assets, Sage Fixed Assets, Oracle, and other widely-used asset accounting software.

Using the AssetFlow web portal requires no software installation so companies can be up and running in no time, leveraging the following features and benefits:

- Centralized fixed asset data for improved accuracy and completeness
- Upload spreadsheets to eliminate manual data entry
- Automated workflow approval and field entry control
- Built-in depreciation logic including control over tax depreciation
- Easily customized asset rules and functionality
- System-ready output that’s compatible with popular accounting applications
- Role-based user logins
- Lowered costs with fewer on-premises software licenses needed
